                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /Clone_lib="C. reinhardtii CC-1690, Stress condition I, normalized, Lambda Zap II"
/note="vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhoI; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP-N (30 min, lhr, 4hr), TAP-S (30 min, lhr, 4hr), TAP-P (4hr, 12hr, 24hr), NO3 to NH4 (30min, lhr, 4hr) and NH4 to NO3 (30min, lhr, 4hr). PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5') and XhoRI (3') sites.
pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with EXASSIST (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chauser@duke.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Souciet, J.L., Aigle, M., Artiguenave, F., Blandin, G., Bolotin-Fukuhara, M., Bon, E., Brottier, P., Casaregola, S., de-Montigny, J., Dulon, B., Durrens, P., Lepingle, A., Llorente, B., Malpertuy, A., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekaia, F., Toffano-Nioche, C., Wesolowski-Louvel, M., Wincker, P. and Weissenbach, J. Genomic exploration of the hemiascomycetous yeasts: 1. A set of yeast species for molecular evolution studies
                                                                                                                                                                                                                        Yarrowia lipolytica.

Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence are the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (28-MAR-2001) Genoscope - Centre National de Sequencage, 
2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (E-mail sequence cns.fr - Web: www.genoscope.cns.fr)
This BAC end sequence is part of a random genomic sequencing program of thirteen yeast species:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Zygosaccharomyces rouxii

/note: Bst I; Constructed at Constructed at Clark,
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.) The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and the DNA was prepared from the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    94;

This sequence is a Chlamydia antigen of the invention, designated CC CPN100639. The nucleic acids (and their complementary sequences) may be CC used as diagnostic agents for detecting the presence of nucleic acids CC encoding Chlamydia antigens in samples according to standard methods, CC and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction CC (PCR) assays. Antisense sequences may be used to down regulate CC expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they CC encode according to standard recombinant DNA methodologies. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC infections. Chlamydia is a pathogen implicated in the development of CC (for example) community acquired pneumonia, upper respiratory tract CC disease (especially bronchitis and sinusitis, asthmatic bronchitis, cut of adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 412;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                The present sequence is the mature, processed form of CPN100640, the 98 kDa outer membrane protein from Chlamydia pneumoniae. Chlamydia pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and sinusitis. It also has an association with atherosclerosis and asthma.
nucleotide sequence encoding the protein or the protein itself may administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was
                                                                              The 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The

Chlamydia pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and sinusitis. It also has an association with atherosclerosis and asthma. The 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.

CC PNIJO638. The nucleic acids (and their complementary sequences) may be cused as diagnostic agents for detecting the presence of nucleic acids cand their complementary sequences) may be cused as diagnostic agents for detecting the presence of nucleic acids cand therefore, for diagnosing chlamydia infections. For example, they may come therefore, for diagnosing chlamydia infections. For example, they may come sequences and probes for diagnostic polymerase chain reaction complex. Antisense sequences may be used to down regulate compression of the proteins and may be used to treat infections. The concleic acids may also be used to produce the protein antigens they compressed according to standard recombinant DNA methodologies. The concode according to standard recombinant DNA methodologies. The contents may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The confictions. Chlamydia is a pathogen implicated in the development of confictions. Chlamydia is a pathogen implicated in the development of confictions community acquired pneumonia, upper respiratory tract constants as the concentration of asthmatic bronchitis, as dult-onset asthma and acute exacerbations of asthmatic bronchitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-DEC-1998;

                                                         This polypeptide comprises the novel 98.4 kDa surface exposed protein Ompl0 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see AAX06822) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Ompl5 (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Ompl5 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals. The nucleic acids and proteins can also be used in the immunization of waccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     novel surface exposed protein Omp5 (see AAW88418) of Chlamydia pneumoniae, a human respiratory pathogen. The invention provides a new species specific test for identifying mammals (including humans) infected with C. pneumoniae. The test comprises detecting antibodies specific for surface exposed proteins Omp4-Omp15 (see AAW88417-28) or detecting nucleic acid fragments encoding them (see AAW06816-27), especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       associated with C.

This sequence is a Chlamydia antigen of the invention, designated CPN10635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C pheumoniae. Its amino acid sequence was deduced from DNA (see AAX06821) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments are also used in the diagnostis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the diagnostis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.

                                                                                                                                                                                                                                   AAY69362-69 represent Chlamydia pneumoniae polypeptides. The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. Phe vaccine response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                 mammals,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-DEC-1998;
01-DEC-1998;
01-DEC-1998;
                             (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of the production of the development of the protein of the development of the development of the productions.
                                                                                                                                                                                            CPN100635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction
                                                                                                                                                                                                                                                                           This sequence is a Chlamydia antigen of the invention, CPN100635. The nucleic acids (and their complementary s
